Product Datasheet

BU Powder Coatings

Interpon PZ 790

AkzoNobel
Tomorrow's Answers Today

Product Description

Interpon PZ 790 is a powder coating primer containing zinc which is designed to give enhanced corrosion protection of mild steel. **Interpon PZ 790** has been designed to be over-coated with a powder topcoats such as **Interpon D1000 and D2000 ranges** In this data sheet the **Interpon PZ 790** over-coated with a finish is termed the "**Interpon PZ 790 system**".

Powder Properties

Chemical type	Thermosetting epoxy, rich in zinc	
Appearance	Grey Metallic, Slightly granular film	
Particle Size	Suitable for electrostatic spray	
Specific gravity	1.80-2.20 g/cm³	
Storage	Dry cool conditions below 30 °C	
Shelf life	12 months	
Stoving schedule (object temperature)	Primer Green Cure	15 – 40 minutes at 110°C 12 – 30 minutes at 130°C
	Final Full Cure	12 – 23 minutes at 160°C 8 – 17 minutes at 170°C 2 – 8 minutes at 200°C 1.5 – 5.5 minutes at 220°C

Test Conditions

The results shown below are based on mechanical and chemical tests which (unless otherwise indicated) have been carried out under laboratory conditions and are given for guidance only. Actual product performance will depend upon the circumstances under which the product is used.

Substrate	0.5mm Steel
Pretreatment	Cold trichloroethylene degreasing
Film Thickness	60 – 80 microns
Stoving Schedule	8 minutes at 200°C (**Interpon PZ 790** primer alone) 2 minutes at 200°C (when used as a primer for **Interpon PZ 790 system**)
Powder Topcoat	**Interpon D1036** (Ral 9010)

Mechanical Tests

Flexibility	ISO 1519 (Cylindrical Mandrel) ISO 6860 (Conical Mandrel)	Pass 4 mm (PZ 790 mono-coat) Pass 5 mm (System) No Cracking (PZ 790 mono-coat) No Cracking (System)
Adhesion	ISO 2409 (2mm Crosshatch)	Gt0 (PZ790 mono-coat) Gt0 (System)
Erichsen Cupping	ISO 1520	Pass 8 mm (PZ790 mono-coat) Pass 6 mm (System)
Impact	ISO 6272	Pass 0.5 kg.m (PZ 790 mono-coat) Pass 0.5 kg.m (System)

Corrosion Tests on Mild Steel

The **Interpon PZ 790 system** provides excellent protection against corrosion on the surface to which it is applied. However, the efficiency of this protection depends on the surface, its preparation before coating and the topcoat applied. If there is penetrating damage through the coating system to the substrate, there may be localised signs ofcorrosion where damage has occurred but this will not affect the adhesion of the film to the adjacent surface. **Interpon PZ 790** considerably limits the extent of spread of corrosion in the event of coating damage.

Neutral Salt Spray	ISO 9227	Results Detailed in Table 1 of Appendix
Cycle 3 C	Renault D17 1686	Results Detailed in Table 2 of Appendix

Pretreatment

For maximum protection it is essential that **Interpon PZ 790** is applied to a clean, dry, oxide-free ferrous metal surface, followed by an **Interpon** topcoat. Surface preparation depends upon the type of surface, its condition and the required performance. For good protection against corrosion the following is recommended:

Grit blasting

- To at least SA 2.5 in accordance with ISO 8501.1, 1998 (F)
- roughness equivalent to B9a, B10b, or B10a (Rz 35-65 µm; Ra 6 – 10 µm) using Rutogest n°3 LCA-CEA, in accordance with NFE 05051 (1981)

and/or

Degreasing & Phosphating

- Followed by passivation, rinsing with demineralized water and drying.
- Follow the procedural advice of the pretreatment supplier.

Application

Interpon PZ 790 can be applied by manual or automatic, electrostatic spray equipment.
Tribo application is not recommended.
The application conditions given below are for information only:

Fluidising air pressure:	1.5kg/cm2 initially then 1kg/cm2
Transport air pressure:	0.5 to 0.8 kg/cm
Recommended voltage:	65 to 70kV

Reclaiming Powder:
Trials, with suitable recycling equipment, must be carried out before commencing production. Attention should be paid to the ratio of new powder, a minimum of 80% must be used. Gun nozzles must be cleaned every 30 minutes.

Interpon PZ 790 should be cured, or at least gelled, using the recommended stoving schedules, before application of the topcoat. The object temperature must not be below 110^{o}C or above 220^{o}C. The primer should be cured in a convection oven, optionally with infra-red heaters, with air temperature not exceeding 220^{o}C.

***Note**: Failure to comply with the recommended curing conditions may affect the adhesion of the topcoat and cause degradation of the coating properties of the system. Parts coated with **Interpon** PZ 790 should not be handled if possible. If handling is unavoidable, clean lint-free gloves must be worn*

Topcoat Application

Interpon PZ 790 should be over-coated on the same site within 12 hours of applying the primer. If the delay exceeds 12 hours the parts should be heated for 10 minutes at 120-150oC (object temperature). The delay must not exceed 24 hours. Refer to the Product Data Sheet for the powder topcoat for application parameters.
To ensure the integrity of the **Interpon PZ 790** system, as well as optimum performance, the whole system must be cured in accordance with the recommended curing conditions for the topcoat. Curing should be carried out in a convection oven, optionally with infra-red heaters. There must be a uniform heat distribution inside the oven.
***Note**: Failure to comply with the recommended final curing conditions may cause variations in colour and gloss and cause degradation of the coating properties of the system.*

A detailed protocol for applying **Interpon PZ 790** system is available on request..

Damage Repair

Any damage to the **Interopn PZ 790** system must be repaired as soon as possible.

Surface preparation Damaged areas must be clean and free of grease or rust. Dry-sand the area with 600-grade paper down to the substrate. The area must be completely free of dust and cleaned with a non-aggressive solvent before proceeding.

Application For repairs the following two-coat liquid paint system from International Protective Coatings is recommended:
1st Coat : two-pack zinc-rich epoxy primer, **Interzinc 72**
2nd Coat : two-pack polyurethane topcoat, **Interthane 990**
Product Data Sheets for these products can be obtained from International Protective Coatings at Felling (Tel: +44 (0) 191 469 6111) or the local office.

Safety Precautions

Please consult the Material Safety Datasheet (MSDS)
